

June Blog: Diagnostics

Having a quality diagnosis is key to saving you a significant amount of money and time. With the diagnosis at Speedy Marietta Transmission Shop one of our skilled technicians will connect a specialized scan tool to your vehicle. The scan tool will read all powertrain and transmission diagnostic trouble codes stored in your vehicles memory. Using these trouble codes as well as a description of the concerns that you are experiencing, the technician will troubleshoot the cause of your concerns and make a recommendation for necessary repairs. Once the repair is completed, the powertrain and or transmission or controller is cleared of all stored codes and the vehicle is driven under the correct condition to verify that your problem has been corrected.

When a vehicle's check engine light is on, this indicates that there is a significant problem with the control system that has been detected by one or more of the vehicles controllers. In many counties in Georgia, your vehicle may possibly fail emissions inspection if your check engine light is on. The check engine light is your vehicle's way of telling you that it has detected a problem that it is affecting the level of emissions released from your vehicle. If problems associated with the check engine light are not diagnosed and repaired in a timely fashion , it can result in expensive repairs. You also run the risk of your car not starting or possibly stalling under these various conditions.

When your check engine light is on, it indicates that a problem needs to be addressed immediately. Repairing the problem right away can ensure that your vehicle continues to be reliable and avoid costly future repairs. Our certified technicians at Speedy Marietta can perform a thorough diagnosis in efforts to save you time and money going forward. Please call us today 770-422-0919 to schedule your appointment.
